

Erratum

In the article “First record of *Lonchophylla bokermanni* (Chiroptera, Phyllostomidae) for the Caatinga biome. Cláudio, V. C. et al. 2018. Mastozoología Neotropical 25:43-51. <https://doi.org/10.31687/saremMN.18.25.1.0.05>” it was stated in Fig. 4 “Extent of occurrence - EOO” of the species *Lonchophylla bokermanni*; however, there was a miscalculation that could affect management decisions for the conservation of the species. An amended version of Fig. 4 is presented below.

The authors regret the error.

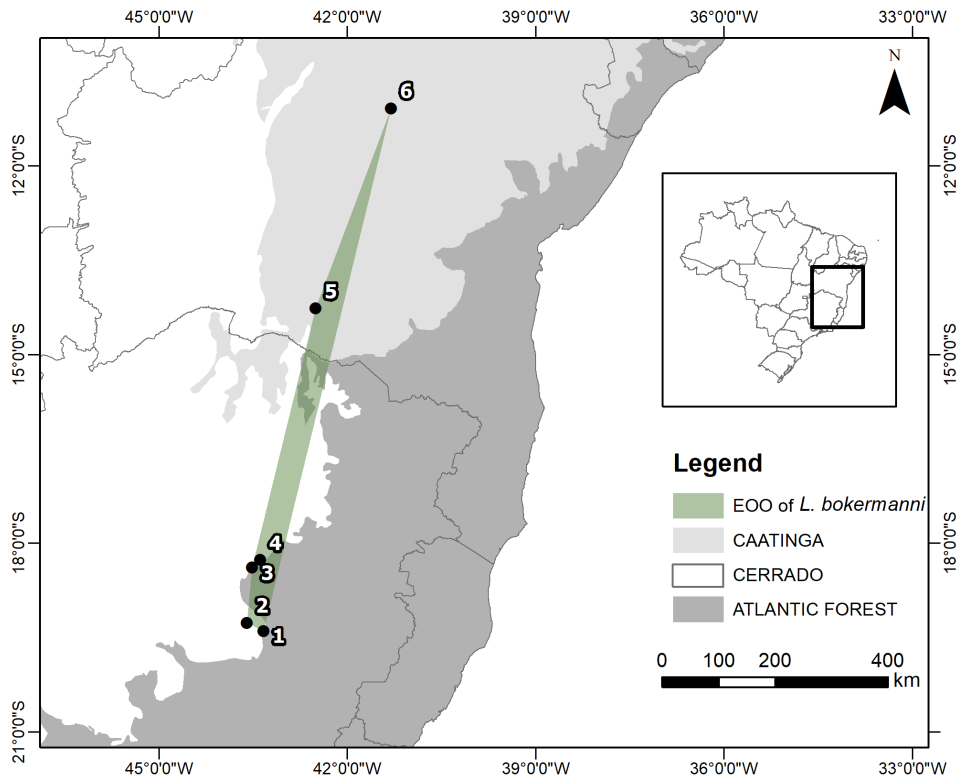

Fig. 4. The green area shows the Extent of Occurrence (EOO) of *L. bokermanni*, with an area of 36 082.6 km². The EOO encompasses the four known records on the Cerrado of Minas Gerais state, at Itambé do Mato Dentro (1), Jaboticatubas (2) and Diamantina (3 and 4); and the two new records on the Caatinga of Bahia state, at Caetité (5) and Ourulândia (6).
